

Post-Master Specialization in Earth Architecture

The [National School of Architecture of Grenoble](#) (France) opens the post-Master Specialization in Earth Architecture 2012-2014, supported by the Ministry of Culture and Communication of France.

The theoretical and practical courses are provided by teachers and researchers of international prestige of the CRATerre Center for the Research and Application of Earth Architecture. The International Center is part of the School of Architecture of Grenoble, which offers the only Master Degree in Earth Architecture in the world.

The Post-Master Specialization in Earth Architecture is designed to satisfy the demand in the areas related to earth architecture and in particular:

- Conservation and sustainable management of architectural and archaeological heritage;
- Scientific and technical bases of earthen architecture and ancient know-how: raw materials, materials, components, structure, building systems and architecture;
- Focus on contemporary architecture and environmental balance, social and economic development;
- Cost of housing in a perspective of sustainable local development;
- Basic scientific research on materials, construction and innovation;
- Academic and professional training.
