

### **Living Catalogue of Resources of the Canary Islands**

*Rincones del Atlántico* has launched a new edition of its website presenting a living catalogue of natural resources and cultural heritage of both the Canary Islands and neighbouring islands. Among the 14 website sections you will find topics such as: traditional architecture, green building, renewable energy, natural farming, culture and landscape. In the different sections you may also find information on technologies that could be of general interest.

The Catalogue, designed by *Rincones del Atlántico*, is a strategic tool for development actors interested in carrying out initiatives with the aim of enhancing the value of culture, traditions, environment, nature and landscape of a territory.

This tool could be replicated by local governments, with the support of the intellectual, cultural and social actors of the territory, to promote participatory development processes based on the resources of the territory.
