

MEMBERS AND NATIONAL NETWORKS OF TP ORGANICS PLATFORM

The [European Technology Platform of TP Organics](#) for organic food and farming research recently renovated its network membership. TP Organics started in 2007 and from the very beginning has been opened to a wide range of stakeholders, especially to civil society, farmers, and with particular attention to SMEs (or SME associations). One of the cornerstones of TP Organics is to engage stakeholders along the whole food supply chain, including consumers, in determining the research needs of the organic sector.

TP Organics integrates views of the organic sector and civil society to represent a broad perspective on research and development priorities that can leverage organic food and farming's potential to address contemporary challenges.

Currently, 28 organizations and networks in the field of sustainable agriculture, research, environment and consumer protection are member of TP Organics. Also SMEs and 4 national technology platforms for organic research (Hungary, Italy, Czech Republic and Spain) hold TP Organics membership. Finally, TP Organics collaborates with 20 research institutes of research networks, who also support the platform financially.

Members and National Networks are presented on TP Organics website where it is possible to log in to their profiles and access to a wide set of innovative practices for organic food and farming research which constitutes an asset for potential users.
