

# EUROPEAN FOCUS GROUP REPORT ON ON ORGANIC FARMING: OPTIMISING ARABLE YIELDS

[TP Organics, the European Technology Platform](#) is promoting among the actors associated to its network the [Report of the Focus Group Organic Farming: Optimising Arable Yields](#). This Report is a very interesting result of years' work of the Focus Group, organized in the framework of the EIP-AGRI Programme of the European Union.

The Report includes proposals for topics that Operational Groups could work on, practical solutions which have already been implemented in some areas of Europe and recommendations for future research topics. In particular the report also gives a list of practical solutions which have already been implemented and could be scaled up or transposed elsewhere in Europe and concrete suggestions for the setting-up of Operational Groups in terms of methodology and practical elements. It also gives recommendations for future research topics and methodologies as well as proposals for training and education programmes.

This Report, focused in the practices realized in European countries, could be of interest for organic farming operators working everywhere.

TP Organics is an initiative of the [IFOAM EU Group](#), the European working level within the International Federation of Organic Agriculture Movements. It brings together more than 160 organisations, associations and enterprises from all EU-28 and candidate countries. IFOAM's goals is the worldwide adoption of ecologically, socially and economically sound systems that are based on the principles of Organic Agriculture.

[The IFOAM Report](#) *Making Europe more organic: 10 years of advocacy for sustainable food and farming*, presents the results and the actors involved in this work, with the links to know more about their experiences.
