

20 SUCCESS STORIES OF AGRICULTURAL INNOVATION FOR FAMILY FARMERS PROMOTED BY FAO

In the framework of the *[International Symposium on Agricultural Innovation for Family Farmers: Unlocking the potential of agricultural innovation to achieve the Sustainable Development Goals](#)* held in November 2018, an Innovation Fair has been organized by FAO to showcase success stories of agricultural innovation for family farming.

The Innovation Fair provided a space to explore key questions and issues of agricultural innovation around the world and its key role to achieve the Sustainable Development Goals. The success stories displayed were focused around four key challenges: climate change; sustainable natural resource management; food insecurity, hunger and malnutrition; and job creation, with a focus on youth.

The innovative experiences participating at the Innovation Fair are presented in the [FAO publication: 20 Success Stories of Agricultural Innovation](#).

These success stories are being implemented by national institutions, organizations and cooperatives in 15 countries of the world, or by international organizations working in wider regions like West Africa, Sub-Saharan Africa and Andes Mountains.

The success stories present a broad range of innovations that are being used in the different agricultural sectors (crop, livestock, fisheries and aquaculture, forestry) and the impact that these agricultural innovations have made in people's lives.

The success stories presented in the publication provide excellent examples of successful agricultural innovation that can inspire new practices in many other countries and territories.
