

THE NEW STRATEGIC RESEARCH & INNOVATION AGENDA LAUNCHED BY THE EUROPEAN TECHNOLOGY PLATFORM

During the Organic Innovation Days held in Brussels on the 3rd and 4th of December 2019, the [European Technology Platform TP Organics](#) launched its new [Strategic Research & Innovation Agenda](#).

The new Strategic Agenda is a key document to ensure that organic research & innovation move forward under the next EU [Horizon Europe](#) framework programme for the budget period from 2021 to 2027, leading the necessary transition to sustainable food and farming in Europe.

The new *Strategic Research & Innovation Agenda* spots 29 potential topics to be addressed within four priority research areas:

- Moving organics forward: priorities for the organic sector.
- Climate-resilient, diversified farming systems based on ecological approaches.
- Redesign of food and agricultural policies.
- Sustainable value chains for better food systems.

A team of leading experts developed the TP Organics new *Strategic Research & Innovation Agenda* considering the latest, evidence-based scientific findings and the input from the participants to workshops and the online consultation held in 2018-2019. TP Organics is convinced that dedicating appropriate funding to these priority areas will help steer Europe's food and farming systems towards sustainability, climate resilience and thriving societies.

[TP Organics](#) is one of the 40 [European Technology Platforms](#) officially recognized by the European Commission. Its mission is to strengthen research & innovation for organics and other agroecological approaches that contribute to sustainable food and farming systems. To achieve this, it unites companies, researchers, farmers, consumers, and civil society organizations active in the organic value chain from production, input & supply to food processing, marketing, and consumption.

Both the full publication and a summary of the *Strategic Research & Innovation Agenda* are available on TP Organics' website.
